DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2 - 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 4 the first adjustment travel is being claimed as nonzero, but in claim 2 it is being claimed as zero. Clarification is required.

DETAILED ACTION

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-5, 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants admitted prior art in view of Lange et al (#5,096,175)

Applicants admitted prior art, hereinafter AAPA, discloses that it is known to have web contacting, pressure members and cutting rollers as claimed (p. 2-3 of the specification). AAPA does not show the spindle drive means for axial adjustment as claimed. However, Lange et al shows spindle means 25,125, 325 to change the axial positions of gears 2 of a folding jaw cylinder 1. Lange et al disclose that a servomotor

30 changes the axial position of the gears. This drive mechanism is being used for adjustment purposes as well as to ensure simultaneous adjustments of respective folding jaws which also are subjected to only low wear (col 2 lines 30+). Lange et al also discloses that subsequent readjustment of a folding blade or knife is not necessary with this drive mechanism. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to provide AAPA with adjustable drive means as taught by Ehlscheid to provide for simultaneous adjustments as well as low wear and tear on the apparatus. Regarding the first, second and third travel adjustment, Lange et al show adjustments with spindle means 25, 125, 325 to change positions of all the jaw pair means so that the adjustments could be greater than zero which is at the stationary position. Regarding claim 12, the examiner takes official notice that it is well known in the art to use monitoring devices for overseeing the operation.

5. Claims 6-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
